AQUATIC REHABILITATIVE EXERCISE

6 Treatments by objective	77
Joint mobility and mobilization . . .	77
Muscular strengthening	78
Progression from unloading to gravitational load.	79
Cardiovascular organic conditioning	80
Neuromuscular control and proprioceptive training	81
Core stability.	82
Relaxation, cooling down, and unloading.	83
References.	84
7 Exercises for the upper limb	85
Vertical position in shallow water. . .	86
Vertical position in immersion	102
Prone position while floating.	107
Supine position in immersion	113
Supine position while floating.	116
Vertical position in deep water	120
Exercises for the elbow, wrist, and hand joints	126
8 Exercises for the lower limb	133
Exercises in gravitational unloading.	134
Exercises with partial joint load . . .	154
Exercises with large equipment. . . .	167
9 Exercises for the spine	171
Horizontal position while floating .	172
Vertical position in shallow water. .	187
Vertical position while floating	192

WORK PROGRAMS BY PATHOLOGY

10 Orthopedic pathologies of the upper limb	203
General characteristics	204
Exercises in vertical position	205
Exercises in prone horizontal	

position	205
Exercises in supine horizontal position	206
Exercises in vertical floatation.	206
Postures in water	207
Exercises against resistance	207
Programs for specific pathologies. . . .	208
Tendon and subacromial pathologies	208
Instability of the shoulder	209
Pathologies of the rotator cuff.	210
Capsulitis.	211
Result of prostheses	212
Stiffness of the shoulder, elbow, or wrist joints.	213
Algodystrophy	214
Clinical cases.	215
Case 1 - Rotator cuff	215
Case 2 - Capsuloplasty.	216
Case 3 - Inverse prosthesis	217
<i>The opinion of...</i> <i>Annick Cyvoct</i>	218
References.	218

11 Orthopedic pathologies

of the lower limb	219
General characteristics	220
Exercises while floating and in partial load conditions . . .	221
Exercises against resistance	222
Postures.	222
Programs for specific pathologies. . . .	223
Arthrosic or degenerative pathologies of the ankle, knee, or hip joints	223
Prostheses of the ankle, knee, or hip joints	224
Ligament lesions of the knee and ankle joints	225
Meniscus lesions.	226
Cartilage lesions	227
Bone fractures	228
Achilles tenorrhaphy.	229
Muscular injury	230

Plantar fasciitis and metatarsalgia .	231	Clinical cases.	262
Clinical cases.	232	Case 1 - Multiple sclerosis	262
Case 1 - Hip prosthesis	232	Case 2 - Vertebral trauma	
Case 2 - ACL reconstruction.	234	with medullary lesion	264
Case 3 - Malleolar fracture	235	Case 3 - Cerebral stroke	266
<i>The opinion of...</i>		<i>The opinion of...</i>	
<i>Fabrizio Tencone.</i>	236	<i>Johan Lambeck.</i>	267
<i>References.</i>	236	<i>The opinion of...</i>	
12 Orthopedic pathologies		<i>Urs N. Gamper</i>	268
of the spine	239	<i>The opinion of...</i>	
General characteristics	240	<i>Marco Barile</i>	269
Exercises while floating		<i>References.</i>	270
and in partial load conditions . . .	240	14 Dysmetabolic, cardiovascular,	
Stabilization exercises	242	rheumatic, and oncological	
Exercises for the cervical tract.	242	pathologies	273
Final considerations	242	General characteristics	274
Programs for specific pathologies. . . .	243	Programs for specific pathologies. . . .	276
Vertebral fractures	243	Phlebopathy (venous	
Protrusions, hernias,		stasis and insufficiency)	276
lumbosciatalgia.	244	Light-moderate hypertension	277
Rigid or dynamic stabilization.	245	Light-moderate cardiopathy.	278
Non-specific rachialgia	246	Obesity and overweightness	279
Clinical cases.	247	Diabetes	
Case 1 - Vertebral stabilization	247	and metabolic syndrome.	280
Case 2 - Lumbar discectomy.	248	Osteoporosis.	281
Case 3 - Vertebral fracture	249	Fibromyalgia.	282
<i>The opinion of...</i>		Rheumatoid arthritis.	283
<i>Marco Brayda-Bruno</i>	250	Post-mastectomy	284
<i>References.</i>	251	Clinical cases.	285
13 Adult neurological degenerative		Case 1 - Obesity	285
pathologies	253	Case 2 - Partial mastectomy.	286
General characteristics	254	Case 3 - Fibromyalgia	287
Programs for specific pathologies. . . .	258	<i>The opinion of...</i>	
Multiple sclerosis	258	<i>Antonio Cuesta-Vargas.</i>	288
Parkinson's disease	259	<i>References.</i>	289
Cerebral stroke	260	Conclusions and work prospects	291
Peripheral polyneuropathy:		Further reading	293
Guillain-Barré, diabetic neuropathy	261
